

SULLIVAN SMITH

(540) 419-4072 | sullysmith46@gmail.com | [linkedin.com/in/sullivan-smith-cs](https://www.linkedin.com/in/sullivan-smith-cs) | github.com/ssmith46
5255 North Williams Creek Drive, King George, VA, 22485

After completing an accelerated degree program, graduating well ahead of my year, I am eager to pursue a technical career in the field of aerospace software.

Education

University of Mary Washington, Fredericksburg, VA

Bachelor of Science in Computer Science, May 2025 GPA: 4.0

Consistently recognized on the President's list for outstanding academic performance.

Phi Beta Kappa Member – For prestigious achievement in a field of science.

Ackerman Award – For distinguished graduate of Computer Science.

Relevant Coursework: Operating Systems, Data Structures and Algorithms, Modeling and Simulation, Deep Learning, Theory of Computation, Applications of Databases, Computer Architecture.

Computer Skills

Programming Languages: Python, Java, C/C++, PHP

Programming Tools: Git, Flask, pip, Junit Test Suite

Databases: SQL, Redis, MongoDB

IDEs: Vim, NetBeans, Visual Studio, Visual Studio Code, Spyder

Operating Systems: Unix, Windows, macOS

Office Management: Outlook, Word, Excel, PowerPoint, Teams

Experience

Naval Surface Warfare Center, Dahlgren, Virginia

Computer Scientist (June 2025 – Present)

- Provided support for simulation tool used in live virtual constructive setting.
- Managed configuration changes using system engineering best practices.
- Troubleshoot complex system failures using generated log files.
- **Active DoD Secret Clearance.**

Naval Surface Warfare Center, Dahlgren, Virginia

Student Intern (May 2023 – June 2025)

- Developed and implemented behavioral functionality for large scale simulation tools (C++).
- Integrated database persistence solutions for web applications.
- Created resources for more efficient project management in Microsoft Excel.

Projects <https://github.com/ssmith46>

Ship Classification Accuracy (CNN) (Fall 2024) – An image classification deep learning project

- Trained a convolutional neural network model to evaluate accuracy of image classification.
- Leveraged VGG16 Convolutional Base Model to compare performance with a custom-trained CNN model.
- This project was completed using the Keras API.

Step VA Web Tool (Spring 2025) – A web management tool developed for a non-profit organization

- Followed agile development practices for requirements gathering and implementation.
- Gained experience using PHP in combination with SQL database management.
- Led a team of six individuals towards success of project.

Stock Simulator (Fall 2024) – A command line application created using C++

- Designed an intuitive and accessible command line stock simulator tool.
- Implemented project design using C++ class inheritance.
- Documented project with comprehensive comments and usability guidelines.

Interests

Aerospace

- Interested in pursuing a field of work that directly supports an aerospace launch-based mission.
- Eager to aide in mission of making human life multi planetary.

Computer Architecture

- Interested in developing optimized software that operates and manipulates computer hardware.
- Actively researching how to develop games for Nintendo Game Boy hardware.
